

## Strained Wire Fencing

### At a glance...

#### Training (Only)

Duration:	1 day
Delivery Method:	Training (Only)
Recognised by:	Lantra Awards

### Introduction

Become proficient in strained wire fencing with our focused course

### Overview in brief

This course can be done in a day to provide all you need to know to install strained wire fences.

It is ideal for new and existing operatives who work in the forestry, agricultural, horticultural, conservation and land based industries.

It'll provide you with an overview of the key information and techniques you need to do your job safely and efficiently.

#### Course sessions:

- Health and safety
- Location of underground and overhead services
- Typical tools and equipment used in fencing
- Methods of measurement, setting out and estimating materials for fence works
- Quality of fencing materials
- Post-installation methods.

Worth noting: If you wish, you can then progress onto the Level 2 and Level 3 Fencing Apprenticeship Frameworks.

## The finer details

This one-day course is training only with a certificate if you complete the course.

## Who should attend?

This course is for you if you're looking to for specific training on strained wire fencing.

## What will be covered?

By the end of this course, you'll be able to:

- Understand health and safety legislation and environmental issues related to work practices
- Be aware of the materials used for fencing and their required standards
- Be able to identify the correct tools and equipment required for fencing work and the correct care of the tools and equipment
- Understand, estimate, set out, and calculate fencing works and the legal implications
- Install posts to the correct line-level, drive, concrete and backfill them
- Install strained wire systems
- Understand methods of inspecting for defects and repair options and testing of completed fence works.
